

Alarm signalling is changing

Act now with our fantastic upgrade offer

We'll upgrade your alarm signalling to one of BT Redcare's Next Generation products at your next maintenance visit. We'll provide a full installation and support service for your upgrade.

Why do you need to upgrade now?

As we move towards a new digital phone service, the traditional analogue phone lines will be upgraded between now and 2025. As your monitored alarm relies on the traditional network to send its signals, your property could be left unprotected if you don't take action.

Future-proofed

The BT Redcare product we will use is ideal for the new digital service you will be moving to.

Faster response times

The system sends signals in seconds and reports connectivity issues to the alarm receiving centre within 60 minutes, much quicker than your current signalling.

Free new signalling equipment

No call costs

No increase on your annual monitoring charge

Why BT Redcare?

- 30+ years' alarm signalling experience
- Enhanced signalling and encrypted from end-to-end
- Products use little power and come in recyclable packaging
