

Why you need to **upgrade** your monitored alarm now

You may be left unprotected
if you don't take action.

Openreach are modernising the way they deliver telephone services to the UK. The traditional phone network will be completely shut down by 2025, but *communication providers are already moving customers* to the new all-IP service.

Take action now and get ahead of the switchover to remain protected

If your fire, security, or any alarm system is using the old phone network to send signals to alert people, it will not work after you're moved to the all-IP digital phone service.

Contact your installer to upgrade your alarm signalling to one of BT Redcare's future-proofed products or for more information head to redcare.bt.com/move-to-all-ip.html

When will you move to the new digital service?

Phone companies will be in touch to let you know when the switchover will take place for you. This will vary by phone service provider and location so acting now will ensure you are one step ahead in keeping your home or business safe.

Why BT Redcare?

- 35+ years' alarm signalling experience
- Enhanced signalling and encrypted from end-to-end
- Products use little power and come in recyclable packaging
